
ctyparser

Release 2.2.0

Mar 17, 2021

Contents

1	Installation	3
2	License	5
3	API	7
4	CLI Usage	9
	Python Module Index	11
	Index	13

A CTY.DAT parser for modern amateur radio programs.

CHAPTER 1

Installation

ctyparser requires Python 3.6 at minimum. Install by running:

```
$ pip install ctyarser
```

CHAPTER 2

License

Copyright 2019-2020 classabbyamp, 0x5c

Released under the MIT License. See `LICENSE` for the full license text.

class `ctyparser.BigCty` (*file_path: Union[str, os.PathLike, None] = None*)
 Class representing a BigCTY dataset. Can be initialised with data by passing the path to a valid `cty.json` file to the constructor.

Parameters `file_path` (*str or os.PathLike, optional*) – Location of the `cty.json` file to load.

Variables `version` (*str*) – the datestamp of the data, YYYYMMDD format.

dump (*cty_file: Union[str, os.PathLike]*) → None
 Dumps the data of the instance to a `cty.json` file.

Parameters `cty_file` (*str or os.PathLike*) – Path to the file to dump to.

Returns None

formatted_version
 Formatted representation of the version/date of the current BigCTY data.

Getter Returns version in YYYY-MM-DD format, or 0000-00-00 (if invalid date)

Type str

import_dat (*dat_file: Union[str, os.PathLike]*) → None
 Imports CTY data from a `CTY.DAT` file.

Parameters `dat_file` (*str or os.PathLike*) – Path to the file to import.

Returns None

load (*cty_file: Union[str, os.PathLike]*) → None
 Loads a `cty.json` file into the instance.

Parameters `cty_file` (*str or os.PathLike*) – Path to the file to load.

Returns None

update () → bool
 Updates the instance's data from the feed.

Raises `Exception` – If there is no date in the feed.

Returns `True` if an update was done, otherwise `False`.

Return type `bool`

version

The version/date of the current BigCTY data.

Getter Returns version in YYYYMMDD format

Type `str`

CHAPTER 4

CLI Usage

Note: CLI is a work in progress!

Currently, only updating/creating a file named `cty.json` in the current working directory is supported:

```
$ python3 -m ctyparser
```

C

`ctyparser`, [7](#)

B

`BigCty` (*class in ctyparser*), 7

C

`ctyparser` (*module*), 7

D

`dump()` (*ctyparser.BigCty method*), 7

F

`formatted_version` (*ctyparser.BigCty attribute*), 7

I

`import_dat()` (*ctyparser.BigCty method*), 7

L

`load()` (*ctyparser.BigCty method*), 7

U

`update()` (*ctyparser.BigCty method*), 7

V

`version` (*ctyparser.BigCty attribute*), 8
